The Gentle Way to Convey

Cablevey Conveyors Visits Boulevard Brewing

You might say it's a good idea to visit your clients on occasion - but what if the installed equipment is "bullet-proof" according to your customer.

According to Maintenance Supervisor, John D'Orvilliers, at the Kansas City brewery, our tubular conveyor systems are just that: bullet-proof.

In 1993 we installed a series of systems to convey malted barley from a mill above, in a barley receiving room, to mash tuns below on the ground floor.

Although sometimes the orientation of the system is the opposite - moving grain from the floor to the top opening of the mash tun - in this case gravity is doing the necessary work after the barley is milled.

“ And since this hasn't changed since the original installation, over 20 years ago, Boulevard Brewing has not replaced the system. ”
