

# Video Camera & Conveyor Monitoring System

## System Inspection Camera Systems

**Install a conveyor monitoring system camera to ensure proper installation and maintenance of your Cablevey conveyor.**

Our cameras are diagnostic tools that run through tubular drag systems to ensure that conveyors are installed correctly. All cameras are equipped with removable micro SD cards and self-contained LED lighting units.

## 5 Reasons to Use a System Inspection Camera

Originally developed for our conveyor installation team, our inspection cameras are also used by millwrights, other installers and owners of our systems. The system inspection camera presents some of the following opportunities including:

### Identify Weaknesses

Our technicians or your personnel can check your systems for weaknesses such as dented or misaligned pipes.

### Easy Cleaning

Particularly for applications with high sanitation requirements, cameras can ensure that tubes are clean of built up material.

### Analytic Tool

The system inspection camera allows us to analyze installation and maintenance issues.

### Remote Access

The system inspection camera allows us to diagnose issues within a few minutes, on-site, or from our offices, without disassembly of the conveyor.

### Easy Installation

The system inspection camera assembly is attached to the cable as two disc halves, that firmly grip and move with the cable.
