

Cablevey Clean in Place (CIP) Feature

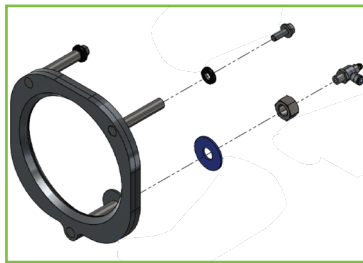

What makes Cablevey stand out from the Competition?

Current Products

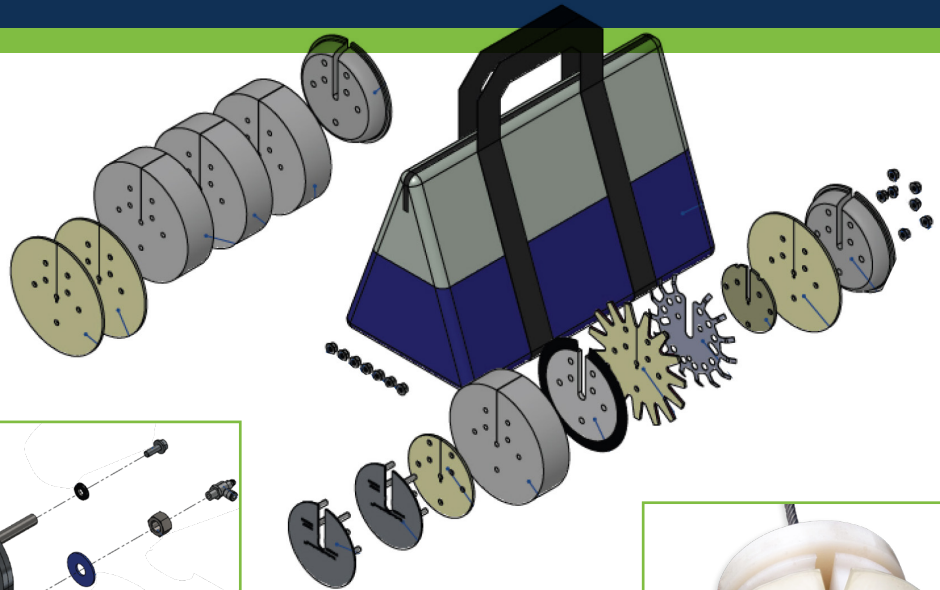

Brush Box

Help clean the discs and eliminate product being carried over to the drive or return line.

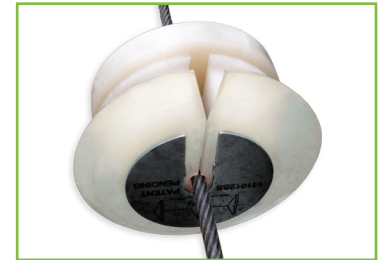

Air Knife for Drying

Help to eliminate carry over and can be installed in most Cablevey components (Drive, Turnaround, Disc Charge, & Brush Box).

Modular Cleaning Assembly Puck

Multiple options all in one cleaning device. Can be used with a sponge, wiper, brush, flexible or metal scrapers. Easy to slide in place and remove anywhere on the cable assembly.

Wiper Disc

Urethane Wiper Disc: a disc insert that wipes away accumulating fines and particles

CIP

What makes Cablevey stand out from the competition when it comes to CIP?

Cablevey Conveyors are designed to be the sanitary solution for your conveying needs. Product is moved in an enclosed system to eliminate the mess seen with non enclosed systems. All conveyors are designed to be cleaned without any disassembly needed. All conveyors are made out of chemical resistant materials (stainless steel or CVT). All systems are easily customizable to be wet or dry cleaned depending on the needs of the customer.

What does the future of CIP at Cablevey look like?

As if everything we already provide for clean in place conveyors wasn't enough the Cablevey Conveyor's Team is always looking for ways to improve the product and make our customers lives easier. In accordance with this, we will be releasing a Clean in Place (CIP) cart for our systems in 2023. Some key features of this cart are below.

- Automate the wet cleaning process. Getting rid of some manual labor and reducing the risk of improper cleaning.
- Data logging all critical information. Easily and hassle-free store cleaning times and key cleaning measurements (temperature, water used, chemicals used, etc).
- Store and use cleaning recipes for multiple systems that can be implemented by a touch of a button.
